CONCERT PERCUSSION

TIMPANI

GRAND CLASSIC SERIES (BERLIN RATCHET OR BERLIN CLUTCH PEDAL SYSTEM)

Designed to provide the ultimate timpani experience for professional players.

The Grand Classic series offers a wide selection of options that allow the player to customize their sound and performance. Players can choose the pedal system, kettle finish and heads to build a set that delivers unmatched performance while fitting their personal style and preferences.

SYMPHONIC GRAND SERIES (BLOCKED PEDAL SYSTEM)

Players at many levels require high performance. Majestic has designed the Symphonic Grand series to include professional features and tone while incorporating a less complex block style pedal system with hand and optional foot fine tuner for easy and precise tuning. Cambered copper kettles are standard equipment and available with precision hammered or polished finish.

The cast frame features two main wheels and a double caster under the pedal arm, making it easy to move. Double locking wheels keep the drums securely in place by controlling both roll and swivel motions. Combining high performance features with state-of-the-art manufacturing, Majestic's Symphonic Grand series offers professional level timpani to a wide range of players.

Majestic Symphonic Grand timpani are now also available without hand and foot fine tuners in the Symphonic Grand Standard Series. Timpani players who prefer the blocked pedal system, but do not need the additional fine tuners can now choose from this series which has all the advantages and features of the Majestic Symphonic Grand timpani, but at a more attractive price. The copper kettle is available in both a hammered and a non-hammered version.

PROPHONIC SERIES (BALANCED PEDAL SYSTEM)

Finally a transportable timpani with professional sound qualities. The patented Prophonic combines the superior sound quality of the Symphonic Grand series with the easy transportability of the Harmonic series. It has a fully suspended and free sounding timpani kettle.

Majestic Prophonic timpani are easy to travel with. 4 pieces can be moved in larger vehicle and 2 pieces will fit inside the smallest car. They are also much easier to store because they need far less space than traditional timpani. Available with copper and aluminium kettles.

SYMPHONIC SERIES (BALANCED PEDAL SYSTEM)

Timpani represent a significant investment to any music program. Majestic's commitment to providing high quality to all levels of players includes all levels of budgets. The Symphonic series features a cast aluminum suspension frame with a choice of kettle materials including precision hammered copper, polished copper, aluminium and the exclusive FRP fiberglass bowl, that allow programs to choose the best fit for their needs.

HARMONIC SERIES (BALANCED PEDAL SYSTEM)

For the band or professional on the move...

No other portable timpani offer the performance, precision, and stability found in the Harmonic series. Our exclusive folding leg and pedal arm system combined with durable lightweight FRP or aluminium kettles and precise tuning mechanisms allow these models to move easily from rehearsal studio to stage without sacrificing performance.

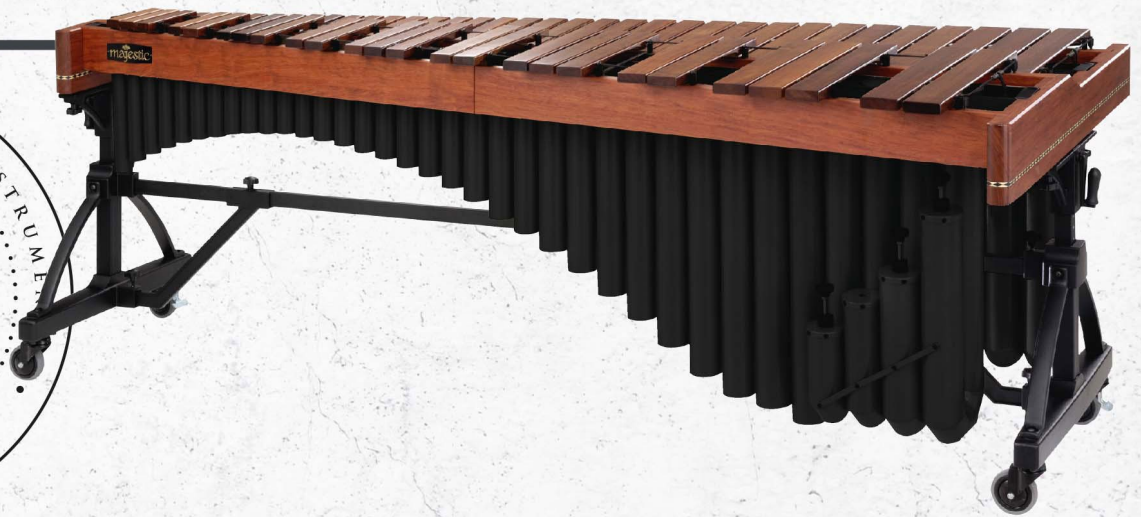

CONCERT SERIES (BLOCKED PEDAL SYSTEM)

Majestic Concert Series timpani offer extremely light weight and advanced performance features. The blocked pedal system, in combination with the stable retractable four leg design, allows for an extended range of heights. Perfect for pit orchestra settings, younger players and even for drum set use. A double wheel set on the front makes the timpani stable when being transported. These timpani are uniquely designed to have a flat bottom when the legs are folded up, so they can be stored upright instead of on the head. And as a finishing touch they feature the newly designed, smoothest pedal system on the market. These innovations in combination with the deep cambered kettles will convince every timpani player. Available with FRP or aluminium kettles.

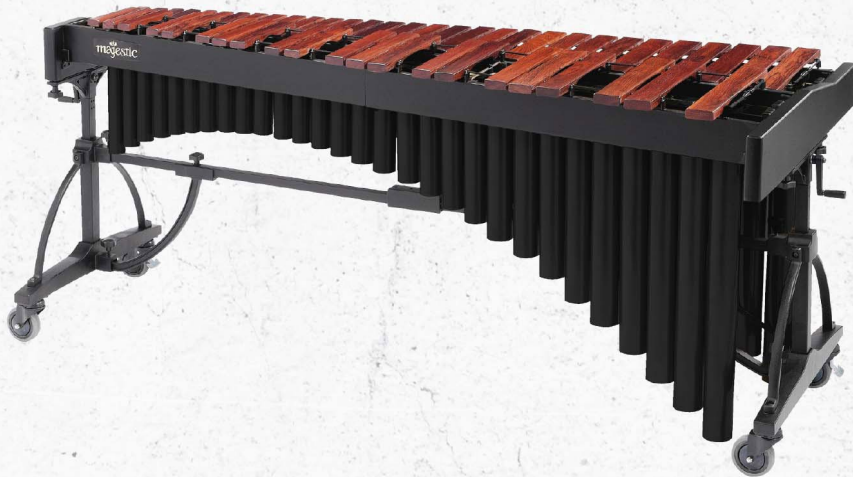

MALLET INSTRUMENTS

MARIMBAS

All Majestic marimbas utilize advanced tuning methods developed in consultation with master tuners in the U.S. and Europe. By pairing these methods with carefully selected aged Honduran rosewood or the warm resonance of newly formulated synthetic bar material, consistently balanced keyboards are produced. With these keyboards over precision-tuned resonators, the resulting tone production is full, balanced and consistent. Add to this effortless height adjustment and easy rolling casters, and it is clear that Majestic marimbas represent the convergence of design elegance, superior tone, and ultimate functionality.

Deluxe series marimbas are available in 4 1/3 octaves. A Majestic marimba resonator is individually made with thicker material, increasing the strength of the entire set. The time-honored curved shape is representative of the luxurious style of the golden age, and the offset arch resonators are specially designed using computerized technology.

GATEWAY SERIES

MARIMBA AND XYLOPHONE

The Gateway modular system of mallet instruments makes performance quality instruments available for young percussionists.

The wide graduated bars and extended range of the M5533D marimba make it a standout in this class. Optional resonators allow students to experience true, rich marimba sound and to refine the techniques of tone production. The additional bag set and exceptional light weight of the stand and frame make it a great portable performance instrument for pit orchestra or worship environments.

MALLET INSTRUMENTS

XYLOPHONES

**majestic**

Crafted from the finest quality aged Honduran Rosewood, Padauk or newly formulated synthetic bar material, Majestic xylophones provide extraordinary options for all types of performance.

With discriminating attention to tuning and materials, the tone is bright and musical. The frames are easy to roll and have incredibly easy height adjustment. Majestic xylophones are available in 3 1/2 and 4 octaves.

VIBRAPHONES

The Majestic vibraphones are available in the most popular 3 octave range and offer a very warm, full-bodied tone that is perfectly balanced throughout the range of the instrument. The wide pedal design with twin pull rods allows the performer to play freely and also creates a more efficient damping mechanism. The Majestic Artist vibraphones offer bars in gold or silver finish.

NEW!
V7530BCF full black frame with black carbon fiber coloured bars.

GLOCKENSPIELS

- A wide range of choices:
- 2½ octaves steel bars in a case
 - professional 2.6 octave carbon steel bars in a flightcase
 - 3,4 octave carbon steel pedal glockenspiel with resonators.

For the development of its bass drums, Majestic made use of advanced technologies. Its suspension system and Fiberskin heads are wonderful and its 360° adjustable frame makes it very easy to use. Available in several sizes.

Concert Black with lug mounted suspension system.

Prophonic with unique double ring full suspension system.

CHIMES

More than 85 years of experience and innovation has made Majestic chimes one of the most advanced designs in the world. Precision manufacturing and the chrome plated finish make it possible to produce a clear and well defined tone.

SNARE DRUMS

Majestic's new Prophonic concert snare drums bring innovative technology to the art of snare drum musicianship. It's newly designed mechanism allows for the use of up to four different types of snare material simultaneously, each with individual tension adjustment and throw off levers, while still allowing all to be engaged or disengaged together with a master switch.

Majestic Concert Black snare drums are available with a variety of sound qualities. The Concert Black snare provides a dynamic and articulate sound that is well suited for all concert and symphonic applications.

CYMBALS

Hand hammered classical & orchestra cymbals. Its rich sound spectrum completes your percussion set-up.

The cymbals are wood 'cooked' (not gas, like others) in a process which involves hammering and lathering in three separate cycles. This results in superior flexibility and linear decay with no unwanted pitch changes and overtones.

TOMS

Majestic's newly designed Concert Toms are available in two different series: the Prophonic Series and the Concert Black Series. The Prophonic has thin maple shells with a lacquered walnut interior. Combined with the patented Isolated Tom mount System (ITS) and single pointed mounted lugs, it provides a warm, opened and focused sound. The Concert Black has thicker maple/birch shells with black wood grain covering. Also mounted with ITS, it provides great sound at an affordable price.
